Configuring TurningPoint Clickers in Your Moodle Course
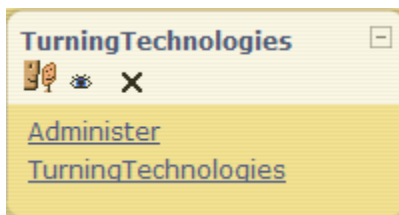

Summary

Once you start using clickers, you may want a way to record and save your student responses. You import your session data directly into Moodle and the Moodle Gradebook for tracking. However you must first configure your course.

Setup

1. First, add the TurningPoint Block to your Moodle Course

   Turn Editing On → Add Blocks →Turning Technologies

2. Click on the link. You will see a list of your students along with a column for Device ID.

You will need to associate a clicker for each student listed. Click on the*, You have not registered…. Link* to add the clicker id.

3. On the back of each clicker, there will be a 6 digit number as well as an engraved number. Enter the 6 digit number and select register.

This must be done for each clicker and each student.

You may also require students to do this themselves. Once you configure the TurningPoint block in your course, they will see a link to register their clicker and enter in their device id in the manner described above.
